

3RD NEWSLETTER

RESPO-VI PROJECT

JANUARY 2024

RESPO-VI is a Norway Grants project, aiming to monitor the development of STEM students' competencies through decision support systems, which will be done with the RESPO-VI application.

PROJECT MEETING OF SLOVENIAN PARTNERS IN NORWAY

In August 2023, a study visit was organized for staff members from Slovenian institutions (MPŠ, TEMIDA, MIITR) involved in the RESPO-VI project.

The visit took place at NTNU in Trondheim, Norway and aimed to introduce the project's objectives and outcomes to NTNU staff members not directly engaged in RESPO-VI activities. The visit to NTNU lasted 3 days.

The NTNU representatives provided an exceptional programme, which included not only expert discussions and professional networking, but also a presentation of the faculty, the city of Trondheim and the culture of the Norwegians.

This visit strengthened collaboration with NTNU's higher education teachers and researchers and facilitated discussions on organizing training for HE teachers and students, as well as other public events within the project.

The visit also included presentations on digital tools for HE, RESPO-VI project overview, application development, and guidelines for integrating the online application into HE curricula in Slovenia and Norway. The findings will inform the implementation of training programs to enhance digital competencies in HE staff and STEM students.

PARTNER MEETING IN MARIBOR, SLOVENIA

In a recent partner meeting held in Maribor, Slovenia, the RESPO-VI project partners came together to discuss various aspects of the project's implementation.

The meeting covered topics such as the current status of project activities, outlining the next steps to be taken, addressing administrative and reporting matters, and planning communication activities. This collaborative effort ensures the smooth progression of the RESPO-VI project and its successful outcomes.

We are diligently working on producing new results. To stay up-to-date and learn more about the RESPO-VI project, follow us on social media:
